

### Auto Replenishment Tool Quick Guide

1. Select the mode "Create / Add to PO"
2. Check the box labeled "Auto Replen". The feature will calculate estimated re-order quantities for 25 styles\* at a time based on the user inputs.
3. Enter the desired parameters
4. Select the "go" button and the feature will run.
5. Move to Pending / Create New PO as normal.

\*Please see the full guide for instructions on how to use the tool for more than 25 styles, along with additional features such as editing individual styles on the same PO.

### Definitions:

**Replen Strategy** - Currently Sales by Size is the only strategy available. As other strategies are developed, the user will access these options from this drop-down menu.

**Sales Sample Range** - This field uses Sales by Size data from Everclear to determine how a style(s) was sold over the time-frame selected by the user. There are pre-selected time-frames to choose from, but a user can also enter a custom range.

**Replen Amount** - This parameter determines how many months of supply to reorder based on the last 30 days of sales for the style in question (e.g 1 Month, 2 Months, 3 Months, etc.).

**Sales Metric** - A user can base the suggested re-order quantities on either Net or Gross unit sales.
